Articulate Storyline 360 Masterclass

Course code C1058

Provider Tertiary Infotech Academy Pte Ltd · UEN: 201200696W

Version v1.0 · 2 October 2026

© 2026 Tertiary Infotech Academy Pte Ltd · C1058

TRAINER PROFILE

Dr Alfred Ang

Role

Principal Trainer · Tertiary Infotech Academy

Expertise

Digital transformation, courseware, e-learning systems and adult learning.

Facilitation

Concept explanation, coached Storyline practice and evidence review.

Quality

Traceable storyboards, accessible interactions and verified publishing.

Learning culture

Explain the reason behind every authoring decision.

Contact

enquiry@tertiaryinfotech.com · +65 6100 0613

OPENING DISCUSSION

Your E-Learning Context

Role

What learning or content do you create or manage?

Audience

Who must act differently after the experience?

Channel

LMS, web, Review 360, video or facilitated delivery?

Friction

Where does current authoring or review lose time?

Experience

Which Storyline feature is already familiar?

Evidence

What artifact will prove improvement?

GROUND RULES

Working Agreements

Participate

Try the tools and explain choices.

Respect

Critique the work, not the person.

Protect assets

Use permitted media and retain rights evidence.

Save versions

Preserve BEGIN/END files and name working copies.

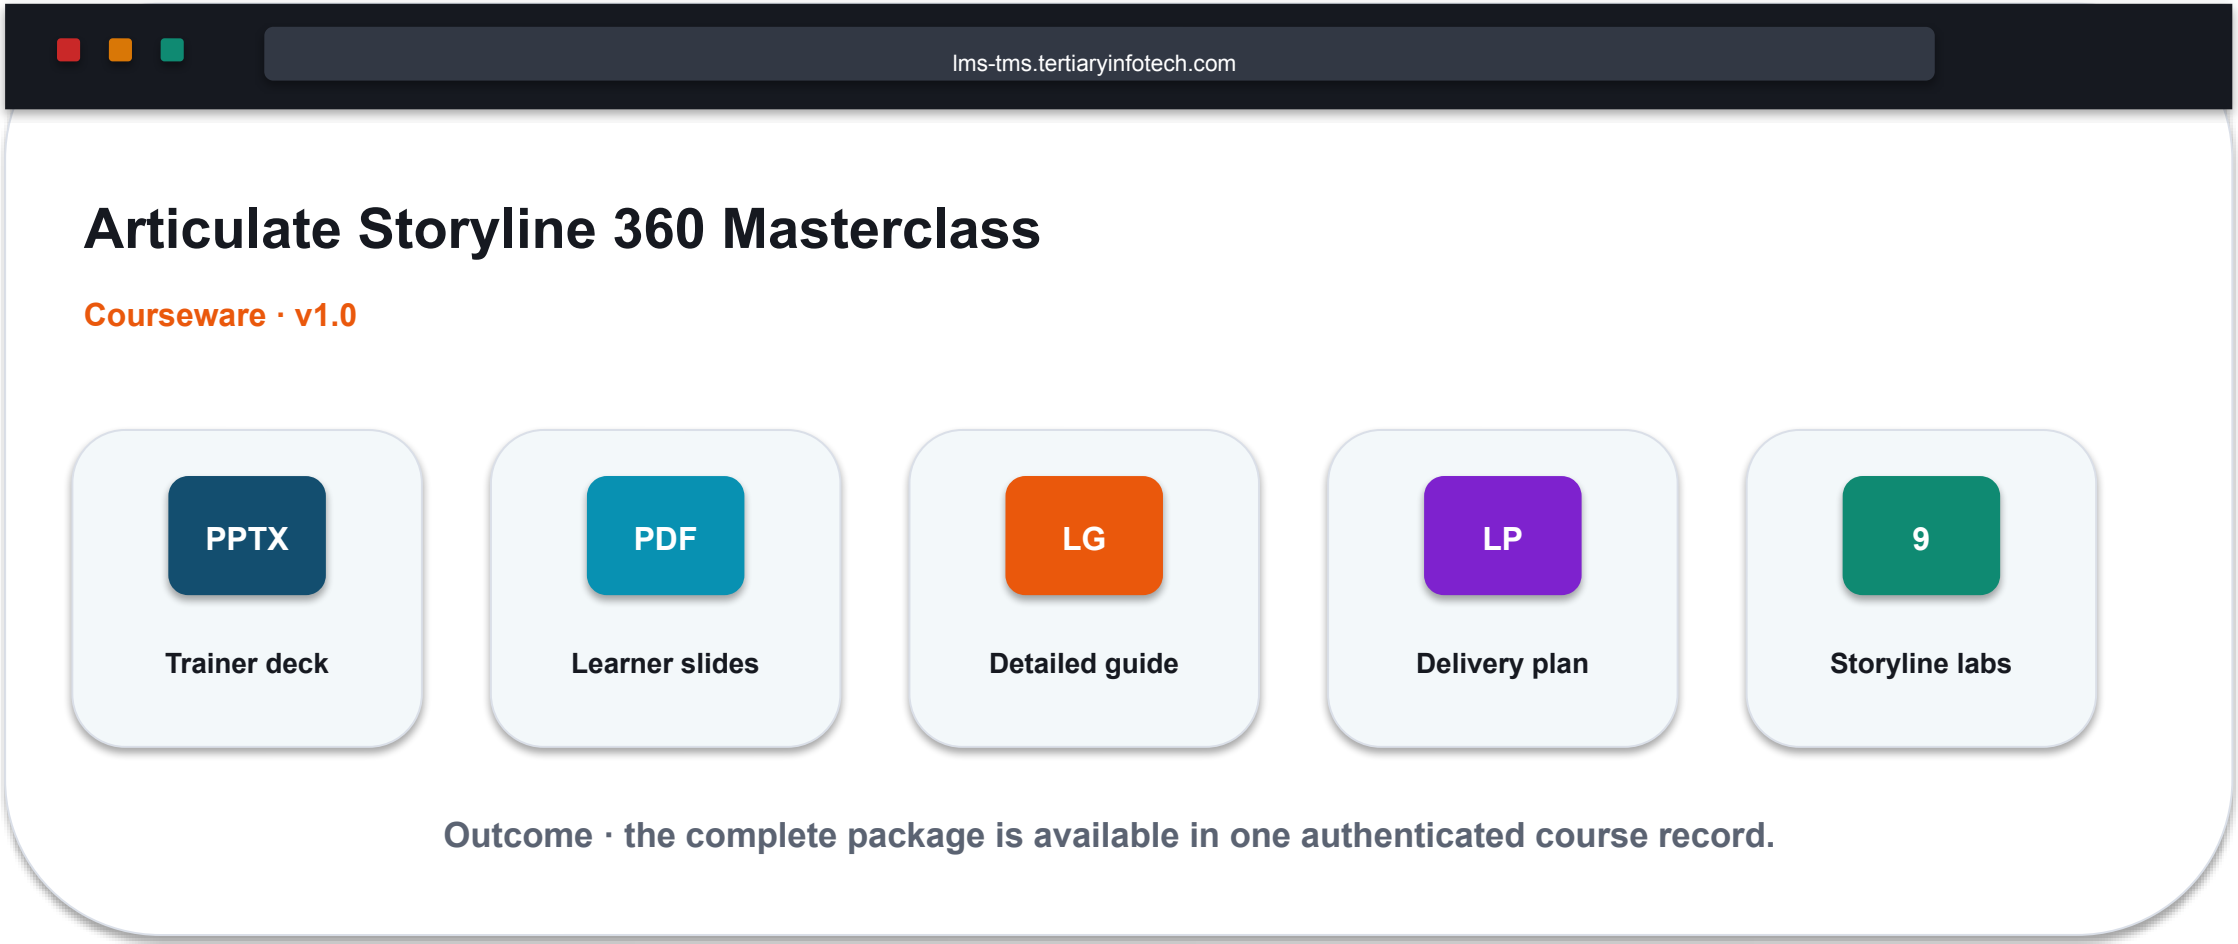

Share safely

Protect learner data and course materials.

Verify

Test preview and published output before delivery.

Download Course Materials

COURSE FLOW

Two-Day Learning Journey

1 **Storyboard**

2 **Curate**

3 **Interact**

4 **Review**

5 **Distribute**

OUTCOME

The course moves from content intent to accessible Storyline construction, reliable interaction and governed delivery.

FOUR CONNECTED LEARNING UNITS

Course Outline

Topic 1

Get Started on Articulate Storyline 360
Performance gap · story purpose · storyboard · prototype · project model · interface · scenes · slides · layers · quizzes · media libraries
Day 1

Topic 2

Working with Assets
Visual grammar · pictures · 360° media · video · audio · captions · accessible equivalents · web content · screen recordings · layout
Day 1 · Labs 5–6 on Day 2

Topic 3

Interactivity
Meaningful choice · learner-controlled discovery · triggers · states · variables · timeline · branching · feedback · motion
Day 2

Topic 4

Presentation, Review and Distribution
Themes · masters · player · multi-device UX · accessibility · Review 360 · preview · LMS/LRS publishing · scheduling · governance
Day 2

AUTHORING READINESS

Tools, Materials and Workspace

Hardware

A supported Windows laptop, suitable display, mouse and reliable storage.

Software

Current supported Articulate Storyline 360 desktop release.

Workspace

Local working folder with short paths and separate backup.

Sources

Rights-cleared pictures, audio, video, scripts and brand materials.

Output brief

Audience, device, channel, tracking, accessibility and update requirements.

Safety

Versioned .story files, protected source content and verified publishes.

TOOL CONTEXT

Storyline Scope

Industry use

Interactive e-learning, simulations, quizzes, scenarios and tracked packages.

Windows authoring

Storyline desktop authoring requires a supported Windows environment.

Interface drift

Labels may move as releases evolve; authoring principles remain stable.

Decision over clicks

Choose features by purpose, audience, accessibility and delivery.

Responsible AI

Review outputs and retain provenance and permission evidence.

Trademark

Articulate and Storyline are Articulate trademarks; this course is provider-developed.

01

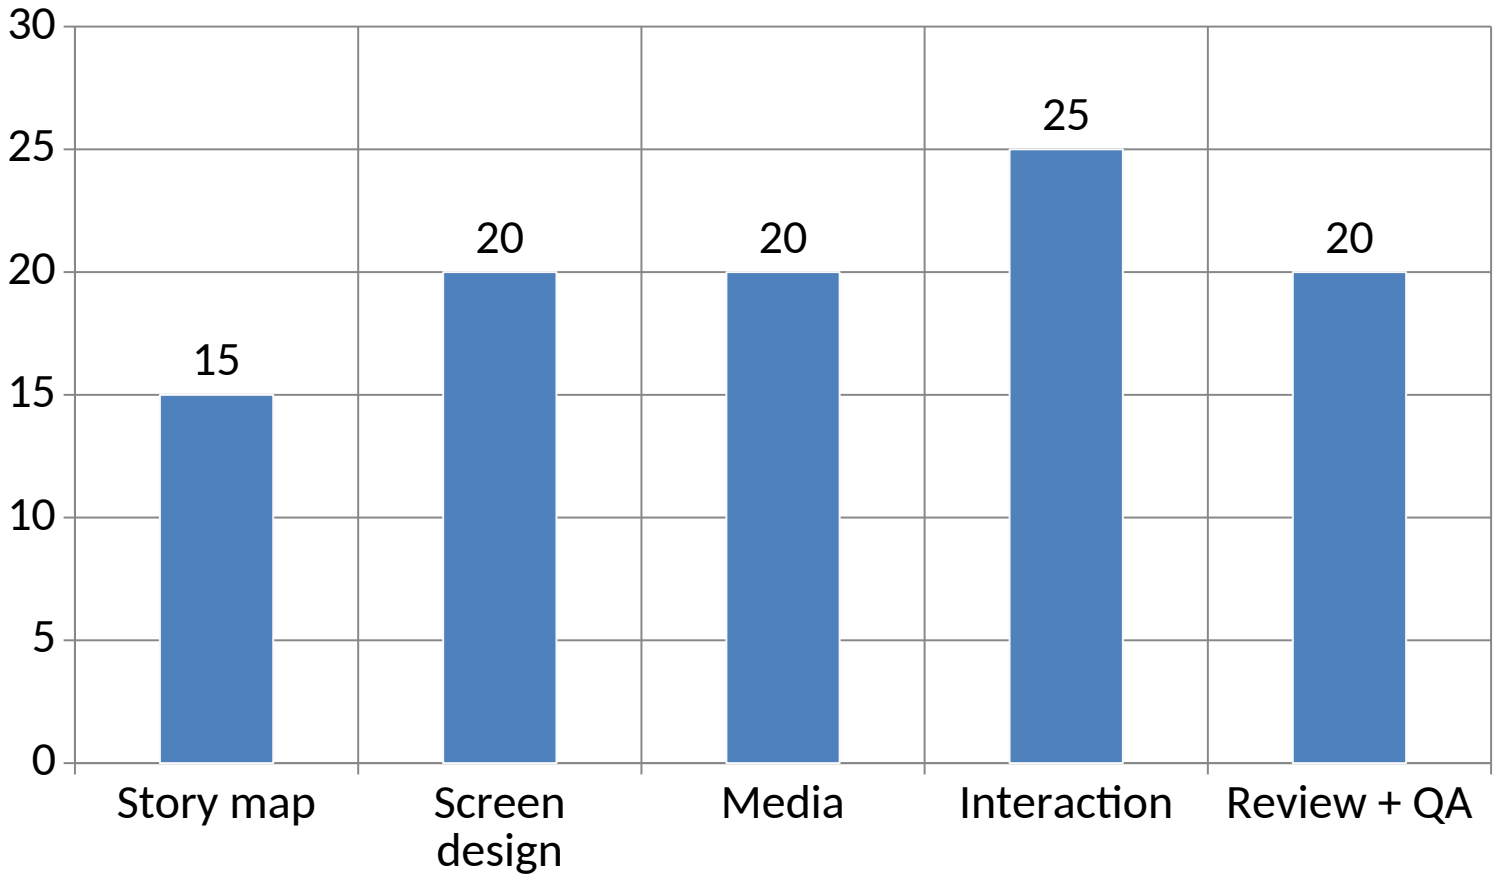

Get Started on Articulate Storyline 360

Performance gap · story purpose · storyboard · prototype · project model · interface · scenes · slides · layers · quizzes · media libraries

Day 1

EDITABLE STORYBOARD-PLANNING CHART

Where Authoring Effort Accumulates

READ THE CHART

Illustrative planning split: interactivity is only one workload. Story architecture, media readiness and review evidence must be planned before production.

Editable native PowerPoint chart

CONCEPT 01 · HOW IT WORKS

Digital Storytelling as a Learning System

How it works

A digital story combines a purposeful narrative, evidence, media and learner agency so attention leads to a decision or behaviour.

Best used for

Onboarding, compliance, product education and scenario-based learning where context matters.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The narrative can be traced from business objective to learner action and measurable outcome.

KEY CONTROLS · FAILURE MODE · PROOF

Digital Storytelling as a Learning System · control and judgement

CONTROL MAP

Audience; objective; protagonist; tension; choice; consequence; evidence; reflection.

WATCH FOR

Decorative stories with no decision, irrelevant emotion or a message that conflicts with the learning objective.

QUALITY PROOF

The narrative can be traced from business objective to learner action and measurable outcome.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Performance Gap Before Course Design

How it works

Course design begins by separating a knowledge or skill gap from process, motivation, tooling or policy problems, then defining the observable performance and measurement strategy.

Best used for

Deciding whether e-learning is an appropriate response and translating a business need into learner actions.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The brief states the verified gap, the required learner behaviour and how success will be measured.

KEY CONTROLS · FAILURE MODE · PROOF

Performance Gap Before Course Design · control and judgement

CONTROL MAP

Stakeholders; current performance; desired performance; root cause; knowledge/skill evidence; objective; success metric.

WATCH FOR

Starting with a feature list, accepting one stakeholder's opinion as the whole diagnosis or promising change that training cannot cause.

QUALITY PROOF

The brief states the verified gap, the required learner behaviour and how success will be measured.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

CONCEPT 03 · HOW IT WORKS

Storyboard Architecture

How it works

A storyboard makes the course visible before production by mapping screens, narration, media, interactions, transitions, branching and evidence.

Best used for

Stakeholder alignment, estimating effort, accessibility planning and preventing expensive rework.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Every screen has a purpose, every branch reconnects or terminates deliberately, and every asset has an owner.

KEY CONTROLS · FAILURE MODE · PROOF

Storyboard Architecture · control and judgement

CONTROL MAP

Screen ID; purpose; on-screen copy; narration; asset; interaction; branch; accessibility; owner; status.

WATCH FOR

Treating the storyboard as a static script or failing to show conditional paths and feedback.

QUALITY PROOF

Every screen has a purpose, every branch reconnects or terminates deliberately, and every asset has an owner.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

CONCEPT 04 · HOW IT WORKS

Prototype-to-Release Feedback Loop

How it works

A small digital prototype makes navigation, visual treatment and interaction tangible before full production; alpha, beta and final releases then narrow the scope of change.

Best used for

Surfacing hidden requirements, validating risky interactions and controlling stakeholder feedback.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Each review stage has a defined purpose, owner, decision record and traceable source version.

Prototype-to-Release Feedback Loop · control and judgement

CONTROL MAP

Concept approval; prototype scope; review questions; alpha completeness; beta target test; defect threshold; final sign-off.

WATCH FOR

Building the whole course before testing the live design, mixing preference feedback with defects or making major structural changes during beta.

QUALITY PROOF

Each review stage has a defined purpose, owner, decision record and traceable source version.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Audience, Objective and Content Promise

How it works

A content promise states what the learner will be able to decide or do and why the experience is worth completing.

Best used for

Selecting scope, tone, examples and interaction depth for a defined audience.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The opening, activities and assessment all support the same learner promise.

Audience, Objective and Content Promise · control and judgement

CONTROL MAP

Role; prior knowledge; device; context; time; motivation; risk; desired behaviour.

WATCH FOR

Beginning with software features instead of learner need, or promising outcomes the content cannot support.

QUALITY PROOF

The opening, activities and assessment all support the same learner promise.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Project Model and File Discipline

How it works

A .story file packages scenes, slides, layers, media, triggers, variables, player settings and project metadata.

Best used for

Versioned authoring, team handoff, recovery and evidence retention.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The source opens locally, the version is identifiable and a separate backup exists.

Project Model and File Discipline · control and judgement

CONTROL MAP

Local working drive; short path; version name; backup; media links; publish folder; archive.

WATCH FOR

Authoring directly on a network/removable drive, overwriting the only copy or confusing published output with the source.

QUALITY PROOF

The source opens locally, the version is identifiable and a separate backup exists.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Story View, Slide View and Interface

Player Feature	Width	Height
Player frame*	+20 pixels	+20 pixels
Title		+23 pixels
One or more topbar tabs		+24 pixels
Volume controller, closed captioning button, play/pause button, seekbar, or navigation buttons		+51 pixels
Sidebar	+240 pixels	

1

How it works

Story View reveals course flow; Slide View reveals one screen's objects, layers, timeline, states, triggers and properties.

2

Best used for

Choosing the right view for architecture versus detailed construction.

3

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

A reviewer can identify scene boundaries, navigation paths and the objects controlling the selected slide.

KEY CONTROLS · FAILURE MODE · PROOF

Story View, Slide View and Interface · control and judgement

CONTROL MAP

Ribbon; scenes; slide canvas; timeline; states; notes; layers; triggers; properties; zoom.

WATCH FOR

Editing details without checking navigation or interpreting Story View connectors as decorative lines.

QUALITY PROOF

A reviewer can identify scene boundaries, navigation paths and the objects controlling the selected slide.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

CONCEPT 08 · HOW IT WORKS

Scenes, Slides and Navigation Order

How it works

Scenes group related slides while triggers determine actual navigation, including non-linear branches.

Best used for

Modules, alternate pathways, remediation and reusable course sections.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Preview proves every intended route, back path and terminal state.

KEY CONTROLS · FAILURE MODE · PROOF

Scenes, Slides and Navigation Order · control and judgement

CONTROL MAP

Scene start; slide order; next/previous triggers; jump target; branching; revisit behaviour.

WATCH FOR

Assuming visual order equals runtime order or creating branches with no return/exit path.

QUALITY PROOF

Preview proves every intended route, back path and terminal state.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

CONCEPT 09 · HOW IT WORKS

Slides, Layers and Revisit Behaviour

How it works

A base slide can reveal layers without leaving the slide; layer properties decide visibility, timeline and revisit behaviour.

Best used for

Progressive disclosure, modal explanations, feedback and controlled exploration.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Layer open/close, focus, timeline and revisit behaviour match the storyboard.

KEY CONTROLS · FAILURE MODE · PROOF

Slides, Layers and Revisit Behaviour · control and judgement

CONTROL MAP

Hide other layers; hide base objects; prevent clicking; pause base; reset/resume/automatic revisit.

WATCH FOR

Unexpected reset, hidden content exposed to assistive technology or click-through behind a modal layer.

QUALITY PROOF

Layer open/close, focus, timeline and revisit behaviour match the storyboard.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Question Slides and Form/Slide Views

How it works

Form View defines question data and scoring; Slide View controls the visual and interactive presentation.

Best used for

Building graded and survey questions while preserving design control.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Preview shows correct scoring, feedback and navigation for correct, incorrect and incomplete responses.

KEY CONTROLS · FAILURE MODE · PROOF

Question Slides and Form/Slide Views · control and judgement

CONTROL MAP

Question type; prompt; choices; correct response; shuffle; attempts; required; score; feedback; branch.

WATCH FOR

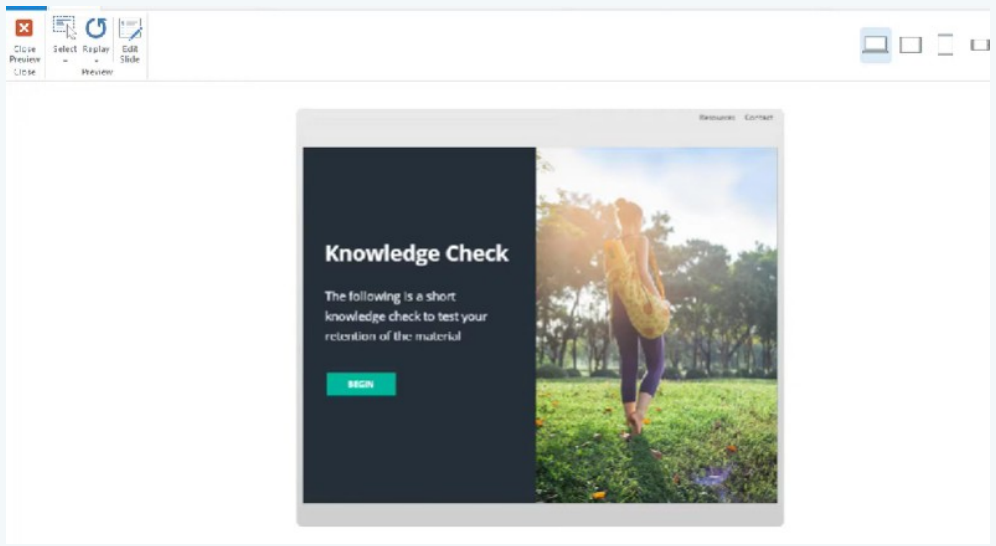

Designing before the scoring model is stable or using a question type that excludes keyboard users.

QUALITY PROOF

Preview shows correct scoring, feedback and navigation for correct, incorrect and incomplete responses.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Result Slides and Completion Logic

1

How it works

A result slide aggregates selected questions or other result slides and can drive completion, pass/fail and retry logic.

2

Best used for

Quizzes, assessments, knowledge checks and LMS reporting.

3

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

Test attempts prove pass, fail, retry and resume outcomes; reported score matches the visible result.

Result Slides and Completion Logic · control and judgement

CONTROL MAP

Tracked questions; passing score; timer; attempts; submit all; retry; review; completion trigger.

WATCH FOR

A result slide that tracks the wrong questions or reports completion before required interaction.

QUALITY PROOF

Test attempts prove pass, fail, retry and resume outcomes; reported score matches the visible result.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Question Banks, Media Library and Content Library

How it works

Question banks randomise reusable questions; Media Library centralises project assets; Content Library supplies reusable templates and media.

Best used for

Scaling consistent courses, controlled variation and efficient asset updates.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Each draw covers the intended criteria and asset replacement updates all expected instances.

KEY CONTROLS · FAILURE MODE · PROOF

Question Banks, Media Library and Content Library · control and judgement

CONTROL MAP

Bank draw; random count; reuse; replace asset; accessibility metadata; template consistency.

WATCH FOR

Random draws that miss required coverage or replacing media without checking crops, captions and rights.

QUALITY PROOF

Each draw covers the intended criteria and asset replacement updates all expected instances.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Lab 01 · Replace Visuals and Establish a Theme

Creative Minds is adapting a camping orientation template for a new learning campaign and needs a consistent visual identity without rebuilding the course.

Replace supplied media and harmonise the project theme while preserving scene structure and navigation.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the working .story file plus screenshots of Story View, one edited slide and the theme settings.**

Full click-by-click procedure · Learner Guide / Lab 01

Lab 02 · Populate the Storyboard with Course Content

The same camping course now needs meaningful module descriptions and supporting imagery before stakeholder review.

Turn a skeletal template into a storyboard-aligned three-slide course overview using reusable project assets.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the completed .story file, a three-screen storyboard table and accessibility/focus-order screenshots.**

Full click-by-click procedure · Learner Guide / Lab 02

EXPLAIN THE DECISION

Topic 1 Checkpoint

Purpose

What must the learner understand or do?

Audience

Which preference or constraint shaped the design?

Mechanism

Which Storyline object or logic implements it?

Failure

What would make the experience unusable or misleading?

Proof

Which preview, publish or accessibility test demonstrates quality?

Next

What evidence would justify the next revision?

02

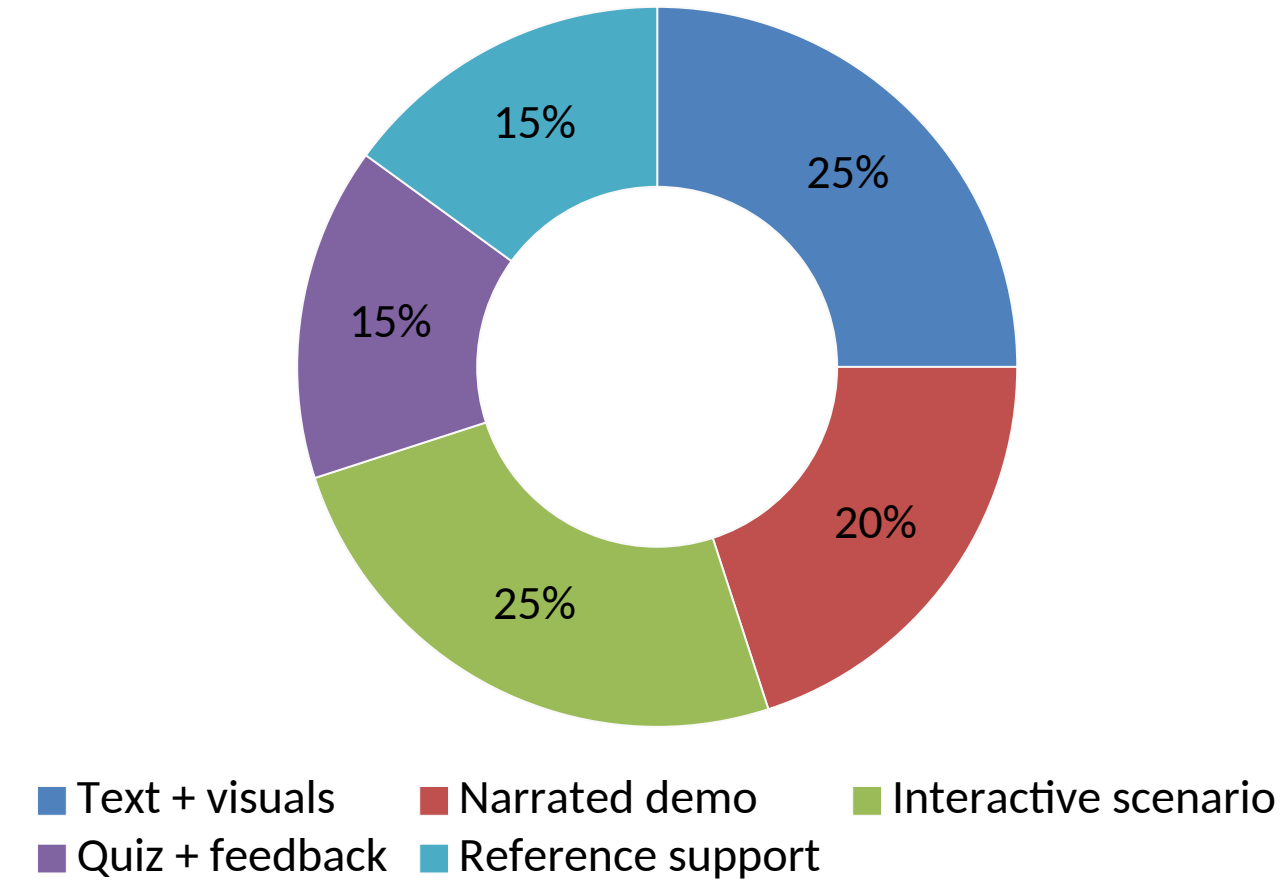

Working with Assets

Visual grammar · pictures · 360° media · video · audio · captions · accessible equivalents · web content · screen recordings · layout

Day 1 · Labs 5–6 on Day 2

EDITABLE CONTENT-PLANNING CHART

Accessible Media Mix

READ THE CHART

A mixed design serves different learning needs. Every audio/video element still needs captions, an accessible path and a reason to exist.

Editable native PowerPoint chart

CONCEPT 13 · HOW IT WORKS

Content Requirements from Audience Preferences

How it works

Content type, length, style, interaction and channel are selected from audience evidence rather than author preference.

Best used for

Microlearning, mobile use, multilingual audiences and role-specific performance support.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

A requirements matrix links each preference to a design and delivery response.

KEY CONTROLS · FAILURE MODE · PROOF

Content Requirements from Audience Preferences · control and judgement

CONTROL MAP

Persona; device; bandwidth; accessibility; context; frequency; tone; data sensitivity.

WATCH FOR

Equating novelty with relevance or using a single format for every audience.

QUALITY PROOF

A requirements matrix links each preference to a design and delivery response.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Visual Design Grammar

How it works

Colour, contrast, repetition, alignment and balance create hierarchy and unity so learners can recognise what matters and how screens relate.

Best used for

Establishing a coherent theme, reusable component set and predictable reading path.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

A grayscale and alignment review still reveals hierarchy, grouping and intended emphasis across representative screens.

KEY CONTROLS · FAILURE MODE · PROOF

Visual Design Grammar · control and judgement

CONTROL MAP

Purposeful palette; strong contrast; repeated typography and shapes; grid alignment; visual weight; consistent image style.

WATCH FOR

Near-matches that look accidental, too many competing styles, colour-only meaning or balancing decoration instead of instructional emphasis.

QUALITY PROOF

A grayscale and alignment review still reveals hierarchy, grouping and intended emphasis across representative screens.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Pictures and Visual Hierarchy

How it works

Pictures carry meaning when crop, contrast, focal point and proximity support the message.

Best used for

Context-setting, demonstrations, comparison and emotional framing.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The focal point survives projection and mobile viewing, and the image has appropriate alternative text.

KEY CONTROLS · FAILURE MODE · PROOF

Pictures and Visual Hierarchy · control and judgement

CONTROL MAP

Crop; size; position; transparency; recolour; alt text; compression; replace picture.

WATCH FOR

Low-resolution sources, decorative clutter, stretched images or text placed over busy detail.

QUALITY PROOF

The focal point survives projection and mobile viewing, and the image has appropriate alternative text.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

CONCEPT 16 · HOW IT WORKS

360° Images, Markers and Hotspots

How it works

A 360° image creates an explorable environment; markers present information and hotspots define interactive regions.

Best used for

Virtual tours, safety inspections, product familiarisation and spatial decisions.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Keyboard and pointer tests reach every required target and the learner knows when exploration is complete.

KEY CONTROLS · FAILURE MODE · PROOF

360° Images, Markers and Hotspots · control and judgement

CONTROL MAP

Initial view; marker; hotspot; label; media; navigation; accessibility; completion rule.

WATCH FOR

Hidden required targets, motion discomfort, inaccessible hotspots or no cue that the scene is interactive.

QUALITY PROOF

Keyboard and pointer tests reach every required target and the learner knows when exploration is complete.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Video as Demonstration Evidence

How it works

Video shows change over time but requires deliberate pacing, controls, compression and an accessible alternative.

Best used for

Procedural demonstrations, expert messages and behaviour modelling.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Playback works in the publish target and captions/transcript convey equivalent information.

Video as Demonstration Evidence · control and judgement

CONTROL MAP

Insert/website video; trim; poster frame; playback; controls; captions; transcript; quality.

WATCH FOR

Autoplay with sound, unreadable screen detail, missing captions or interaction placed over video controls.

QUALITY PROOF

Playback works in the publish target and captions/transcript convey equivalent information.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Video and Screencast Production Workflow

How it works

Clear audio, a controlled recording environment, a concise outline and a rehearsed screen path improve instructional video more than expensive equipment alone.

Best used for

Talking-head introductions, software demonstrations and short worked examples.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

A test recording is intelligible, visually stable and follows a rehearsed path with no private or distracting content.

KEY CONTROLS · FAILURE MODE · PROOF

Video and Screencast Production Workflow · control and judgement

CONTROL MAP

External microphone; noise/echo check; lighting; stable camera; outline; recording window; prepared files; dry run; edit points.

WATCH FOR

Relying on camera quality while ignoring sound, improvising a long script, exposing notifications or searching for files during capture.

QUALITY PROOF

A test recording is intelligible, visually stable and follows a rehearsed path with no private or distracting content.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Audio, Narration and Closed Captions

How it works

Narration can guide attention while captions expose speech and meaningful sound to learners who cannot hear it.

Best used for

Story-led modules, demonstrations and multilingual or noisy environments.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Audio is intelligible, synchronised and optional; captions are accurate and available in the player.

Audio, Narration and Closed Captions · control and judgement

CONTROL MAP

Record/import; waveform; trim; fade; volume; VTT captions; caption button; transcript.

WATCH FOR

Narration duplicating every on-screen word, inconsistent levels, timing drift or captions covering controls.

QUALITY PROOF

Audio is intelligible, synchronised and optional; captions are accurate and available in the player.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Accessible Media Equivalence

How it works

Accessible media provides equivalent meaning through captions, transcripts, descriptive narration or an accessible job aid, while keeping playback under learner control.

Best used for

Audio, talking-head video, demonstrations and software training used by learners with hearing, vision or mobility limitations.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

A learner can obtain the same instructional meaning and complete the task without depending on sight, hearing or precise pointer control.

Accessible Media Equivalence · control and judgement

CONTROL MAP

Speaker identification; meaningful sound; visual-action description; transcript; step-based job aid; pause/seek; keyboard path; non-autoplay.

WATCH FOR

A verbatim transcript that omits visual actions, captions without meaningful sound, forced autoplay or requiring learners to self-identify before receiving an equivalent.

QUALITY PROOF

A learner can obtain the same instructional meaning and complete the task without depending on sight, hearing or precise pointer control.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Accessibility: Focus, Names and Alternatives

How it works

The accessibility tree, focus order, object names and alternative text determine what keyboard and screen-reader users encounter.

Best used for

Every production course, especially custom navigation and layered interactions.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Keyboard-only and screen-reader walkthroughs preserve meaning, order and operability.

KEY CONTROLS · FAILURE MODE · PROOF

Accessibility: Focus, Names and Alternatives · control and judgement

CONTROL MAP

Focus order; visible to accessibility tools; alt text; object name; tab sequence; focus indicator; language.

WATCH FOR

Decorative objects announced, duplicate labels, illogical focus or interactions that depend only on hover/drag.

QUALITY PROOF

Keyboard-only and screen-reader walkthroughs preserve meaning, order and operability.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Web Objects and External Content

How it works

A web object embeds or launches web content while the course remains responsible for context, security and fallback.

Best used for

Live reference tools, maps, simulations or approved external services.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Published tests confirm access, fallback, privacy expectations and keyboard exit from the object.

Web Objects and External Content · control and judgement

CONTROL MAP

URL/local web folder; load automatically/on click; display in slide/new window; fallback link; focus.

WATCH FOR

Third-party tracking, mixed content, offline failure, broken focus or assuming embedded content is accessible.

QUALITY PROOF

Published tests confirm access, fallback, privacy expectations and keyboard exit from the object.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Screen Recording Modes

How it works

One recording can be inserted as a video or as step-by-step View, Try and Test slides.

Best used for

Software demonstrations, coached simulations and performance checks.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The learner can see the target action and the simulation accepts the intended interaction.

Screen Recording Modes · control and judgement

CONTROL MAP

Recording area; microphone; screen size; video/View/Try/Test; action captions; mouse path; edits.

WATCH FOR

Recording personal data, tiny UI, changing software versions or generating unreliable automatic steps.

QUALITY PROOF

The learner can see the target action and the simulation accepts the intended interaction.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Shapes, Captions, Text Boxes and Tables

How it works

Native objects create editable structure, hierarchy and interactive targets without baking information into an image.

Best used for

Callouts, process graphics, labels, layouts and accessible data presentation.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Objects remain editable, readable and logically ordered at the delivery size.

KEY CONTROLS · FAILURE MODE · PROOF

Shapes, Captions, Text Boxes and Tables · control and judgement

CONTROL MAP

Fill; line; radius; text style; margins; alignment; table headers; accessibility; states.

WATCH FOR

Small targets, low contrast, inconsistent typography or using a table only to position content.

QUALITY PROOF

Objects remain editable, readable and logically ordered at the delivery size.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Formatting, Sizing and Positioning

How it works

Consistent alignment, spacing, size and theme choices reduce cognitive load and make interaction predictable.

Best used for

Templates, reusable components and multi-author projects.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Shared edges and spacing are consistent; no object clips at common player sizes.

Formatting, Sizing and Positioning · control and judgement

CONTROL MAP

Align; distribute; size; position; rotation; guides; theme fonts/colours; format painter.

WATCH FOR

Pixel-level drift, stretched media, accidental off-slide objects or inconsistent states.

QUALITY PROOF

Shared edges and spacing are consistent; no object clips at common player sizes.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Lab 03 · Curate and Replace Audience-Fit Media

Stakeholder feedback says the first visual set does not fit new campers in a contemporary learning context.

Evaluate customer preferences, select a suitable visual style and replace project assets consistently.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the completed .story file, audience requirements matrix, asset/source register and before/after screenshots.**

Full click-by-click procedure · Learner Guide / Lab 03

Lab 04 · Create and Govern an AI-Assisted Visual Variation

Creative Minds wants to test a western-poster visual direction without losing the approved baseline or provenance record.

Create an AI-assisted visual variation, evaluate it against the brief and retain transparent provenance evidence.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the completed .story file, prompt/provenance record, evaluation checklist and before/after screenshots.**

Full click-by-click procedure · Learner Guide / Lab 04

Lab 05 · Add Narration and Closed Captions

The course needs optional narration for guidance and accurate captions for learners in noisy or hearing-limited contexts.

Add and synchronise narration, captions and accessible playback controls without duplicating unnecessary on-screen text.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the completed .story file, caption-timing screenshot, waveform/timeline screenshot and accessibility test record.**

Full click-by-click procedure · Learner Guide / Lab 05

Lab 06 · Build a Multi-Slide Audio and Caption System

A three-slide course needs consistent narration, caption files and learner control across the whole scene.

Implement multiple audio/caption tracks consistently and validate timing, focus and playback behaviour across slides.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the completed .story file, media map, scene-wide audio/caption test matrix and representative screenshots.**

Full click-by-click procedure · Learner Guide / Lab 06

EXPLAIN THE DECISION

Topic 2 Checkpoint

Purpose

What must the learner understand or do?

Audience

Which preference or constraint shaped the design?

Mechanism

Which Storyline object or logic implements it?

Failure

What would make the experience unusable or misleading?

Proof

Which preview, publish or accessibility test demonstrates quality?

Next

What evidence would justify the next revision?

03

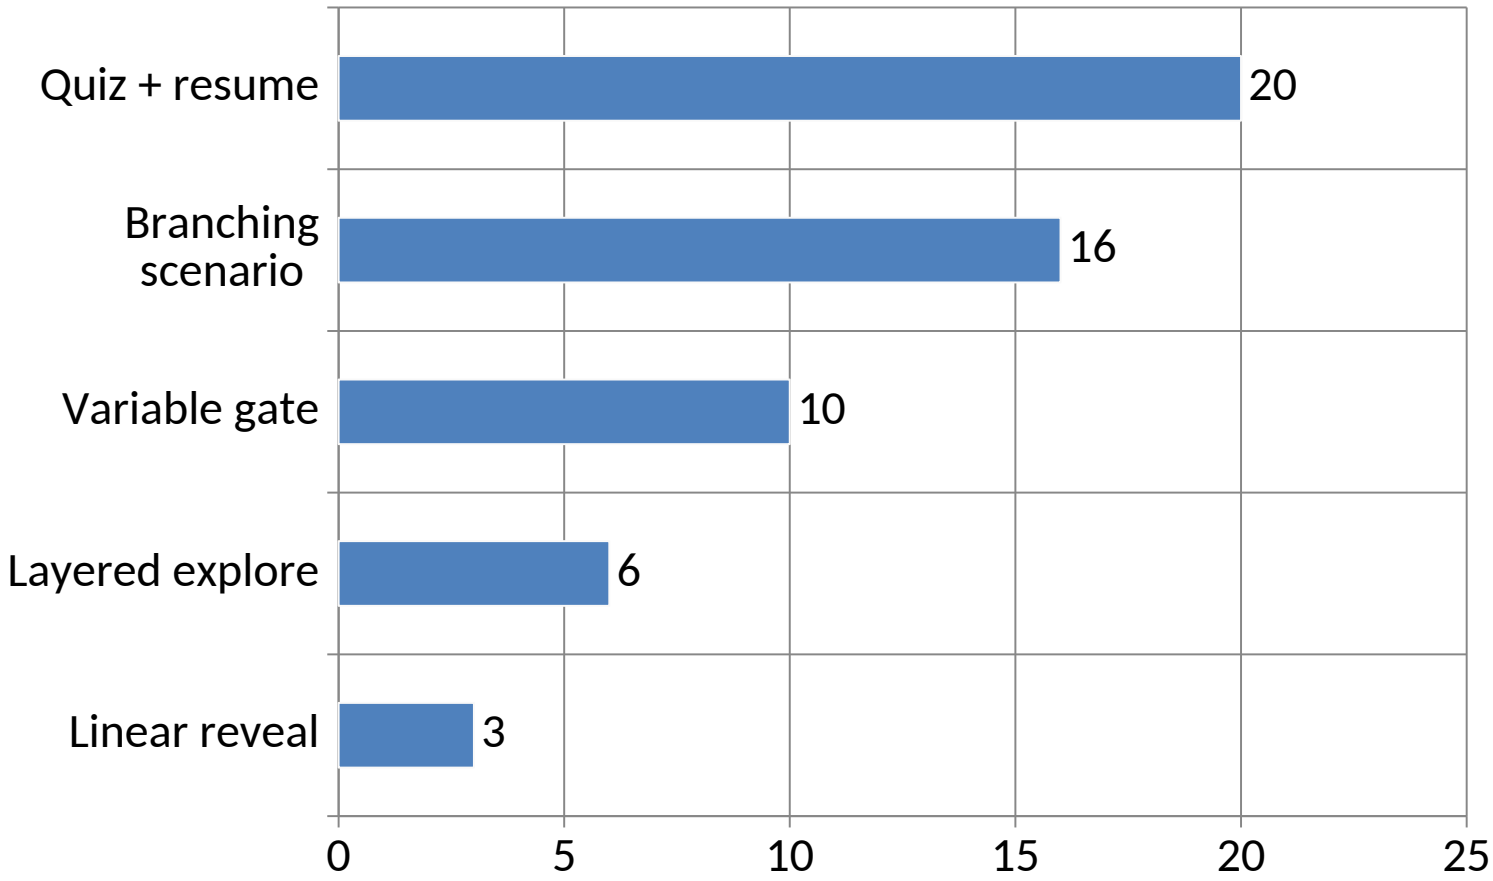

Interactivity

Meaningful choice · learner-controlled discovery · triggers · states · variables · timeline · branching · feedback · motion

Day 2

EDITABLE QA-PLANNING CHART

Interaction Complexity Risk

READ THE CHART

Illustrative test-case counts grow faster than the number of visible screens. Map trigger order, revisit, retry and accessibility before adding complexity.

Editable native PowerPoint chart

Zoom Regions and Guided Attention

1

How it works

A zoom region enlarges a defined area during the slide timeline to direct attention.

2

Best used for

Screen detail, maps and still-image close-ups where context can be restored.

3

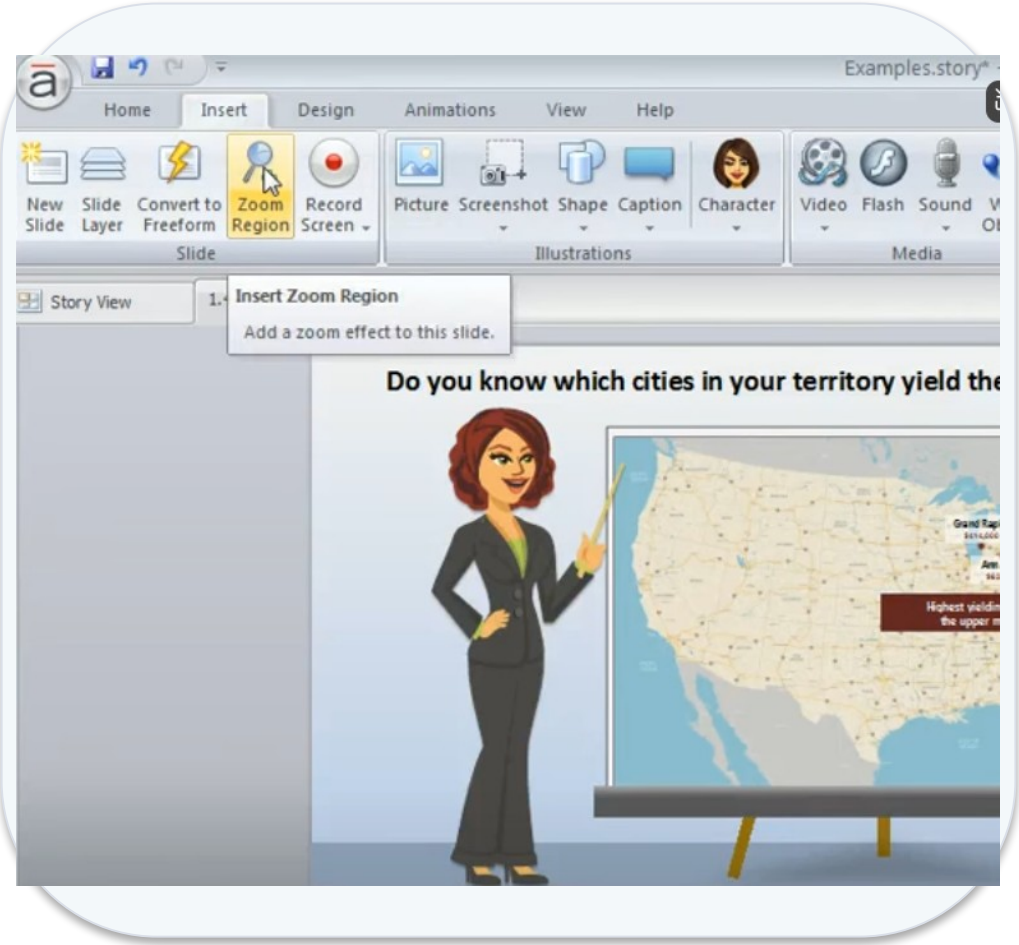

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

The zoom begins when the explanation needs it and returns without hiding required context.

KEY CONTROLS · FAILURE MODE · PROOF

Zoom Regions and Guided Attention · control and judgement

CONTROL MAP

Region bounds; position; timeline start/end; speed; layer limitation; return to normal.

WATCH FOR

Motion without purpose, unreadable destination detail or excessive zoom causing disorientation.

QUALITY PROOF

The zoom begins when the explanation needs it and returns without hiding required context.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

CONCEPT 27 · HOW IT WORKS

Buttons, Markers, Hotspots and Controls

How it works

Interactive objects expose actions through clear affordances, states, labels and trigger responses.

Best used for

Exploration, reveal interactions, custom navigation and decision points.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Pointer, keyboard and screen-reader users can identify, operate and understand every control.

Buttons, Markers, Hotspots and Controls · control and judgement

CONTROL MAP

Target size; normal/hover/selected/visited/disabled; alt text; trigger; focus order; feedback.

WATCH FOR

Invisible hotspots, tiny targets, colour-only state changes or controls that look decorative.

QUALITY PROOF

Pointer, keyboard and screen-reader users can identify, operate and understand every control.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Meaningful Choice, Consequence and Feedback

How it works

An interaction earns its place when a realistic learner decision changes what happens next and feedback explains the consequence in context.

Best used for

Scenario practice, judgement calls, objection handling and safe rehearsal of high-risk decisions.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

A reviewer can trace each interaction from objective to authentic decision, consequence and transferable feedback.

KEY CONTROLS · FAILURE MODE · PROOF

Meaningful Choice, Consequence and Feedback · control and judgement

CONTROL MAP

Relevant prompt; plausible options; decision point; immediate consequence; explanatory feedback; retry/reflection; objective alignment.

WATCH FOR

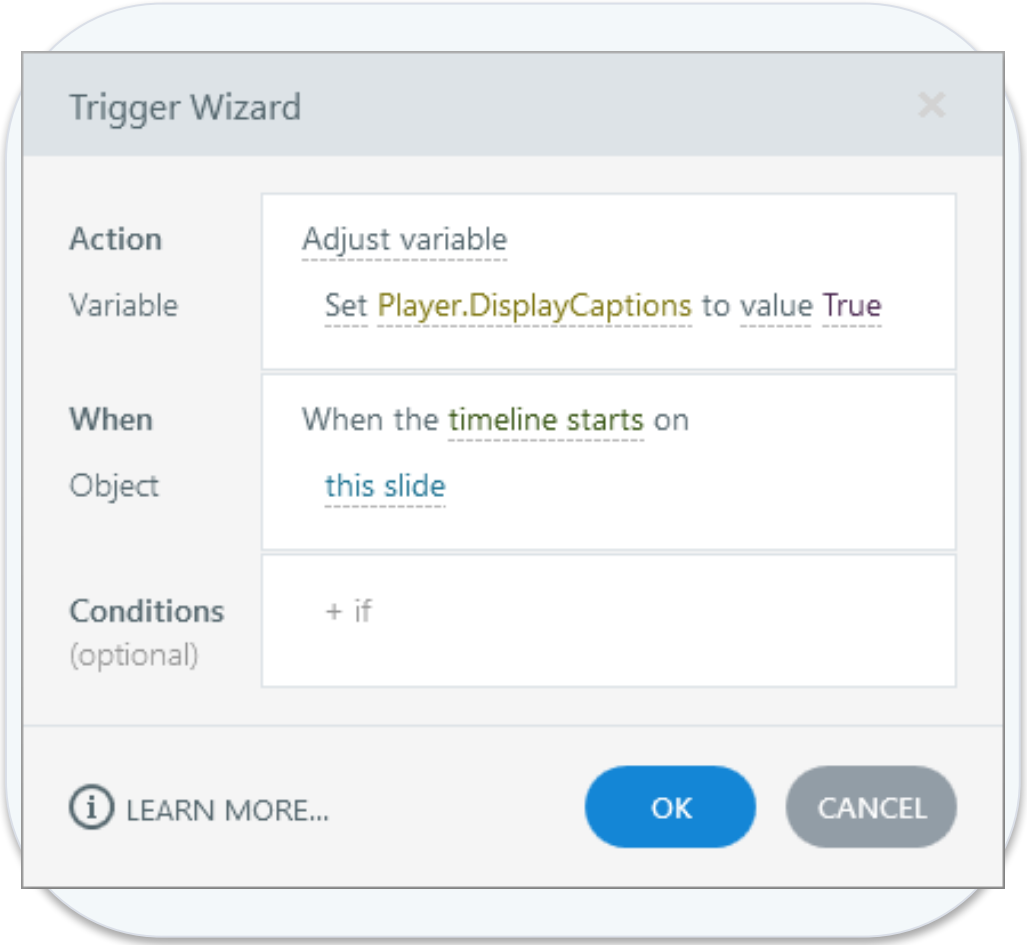

Clicking for its own sake, trivia disconnected from work, cosmetic branches or feedback that only says correct/incorrect.

QUALITY PROOF

A reviewer can trace each interaction from objective to authentic decision, consequence and transferable feedback.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Trigger Anatomy and Execution Order

1

How it works

A trigger performs an action on an object or variable when an event occurs, optionally under conditions.

2

Best used for

Navigation, layer control, state changes, media control, scoring and custom logic.

3

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

Trigger panel order matches the logic diagram and tests prove every condition path.

Trigger Anatomy and Execution Order · control and judgement

CONTROL MAP

Action; target; event; object; condition; order; scope; copied trigger.

WATCH FOR

Correct triggers in the wrong order, triggers attached to covered objects or ambiguous next-slide targets.

QUALITY PROOF

Trigger panel order matches the logic diagram and tests prove every condition path.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Object States

1

How it works

States store visual versions of one object; built-in states may respond automatically while custom states need explicit logic.

2

Best used for

Selection, progress, disabled controls, visited indicators and feedback.

3

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

State changes are predictable, perceivable and preserved appropriately on revisit.

Object States · control and judgement

CONTROL MAP

Normal; hover; down; selected; visited; disabled; custom; initial state; edit states.

WATCH FOR

Duplicating objects instead of states, hiding critical meaning only in colour or leaving a disabled control focusable.

QUALITY PROOF

State changes are predictable, perceivable and preserved appropriately on revisit.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Variables and Conditional Logic

Use variables when you want to:	Use states when you want to:
• Remember values entered by the learner • Count the number of times a button is clicked • Perform mathematical calculations • Trigger actions based on learner input	• Remember which objects have been clicked • Change how objects look based on learner interaction • Trigger actions based on learner interaction

1

How it works

Text, number and true/false variables retain information that triggers can evaluate to personalise or control flow.

2

Best used for

Progress gates, scores, names, branching, toggles and completion checks.

3

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

A test matrix proves default, boundary and reset cases and shows the variable value where needed.

KEY CONTROLS · FAILURE MODE · PROOF

Variables and Conditional Logic · control and judgement

CONTROL MAP

Variable type; default; adjust; reference; condition; operator; scope; reset.

WATCH FOR

Type mismatch, stale values on retry, multiple variables representing one fact or conditions evaluated too early.

QUALITY PROOF

A test matrix proves default, boundary and reset cases and shows the variable value where needed.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Timeline, Cue Points and Synchronisation

1

How it works

The timeline controls when objects and media appear; cue points provide named anchors for synchronised actions.

2

Best used for

Narrated animation, timed reveals and media-coordinated interactions.

3

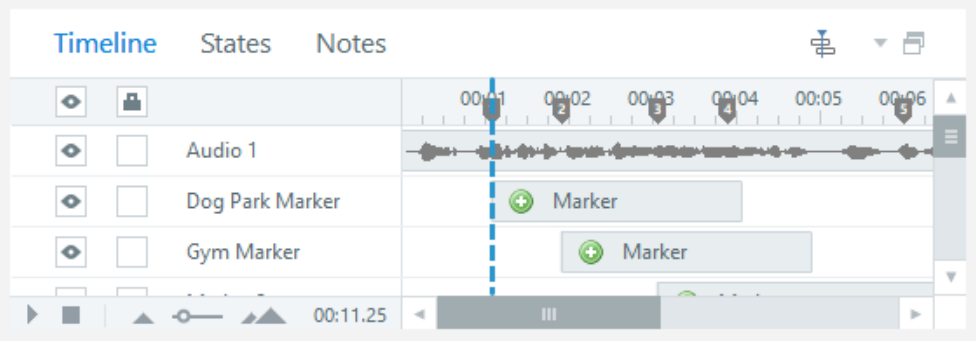

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

Playback remains synchronised after seeking, replay and common device performance variation.

KEY CONTROLS · FAILURE MODE · PROOF

Timeline, Cue Points and Synchronisation · control and judgement

CONTROL MAP

Start/end; show until end; align to playhead; cue point; lock; visibility; waveform.

WATCH FOR

Objects ending too early, animation drift after audio edits or a locked timeline hiding the cause.

QUALITY PROOF

Playback remains synchronised after seeking, replay and common device performance variation.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Animations, Motion Paths and Transitions

How it works

Animations affect objects, motion paths move them, and transitions affect the change between slides.

Best used for

Demonstrating sequence, change, direction and continuity.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Motion clarifies one teaching point and the static slide still communicates the complete meaning.

KEY CONTROLS · FAILURE MODE · PROOF

Animations, Motion Paths and Transitions · control and judgement

CONTROL MAP

Entrance/exit/emphasis; duration; delay; direction; path; orient to path; transition.

WATCH FOR

Decorative motion, competing animations, motion-trigger mismatch or inaccessible information shown too briefly.

QUALITY PROOF

Motion clarifies one teaching point and the static slide still communicates the complete meaning.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Freeform Interactions and Question Conversion

How it works

Existing objects can become selectable, drag-and-drop, text-entry or hotspot responses with scoring and feedback.

Best used for

Authentic decisions where standard question layouts are too restrictive.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The interaction has an accessible equivalent and correct/incorrect outcomes match the rubric.

KEY CONTROLS · FAILURE MODE · PROOF

Freeform Interactions and Question Conversion · control and judgement

CONTROL MAP

Convert to freeform; response objects; drop targets; correct set; attempts; feedback; accessibility.

WATCH FOR

Beautiful interaction with ambiguous instructions, overlapping targets or keyboard-inaccessible drag behaviour.

QUALITY PROOF

The interaction has an accessible equivalent and correct/incorrect outcomes match the rubric.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Branching Scenarios and Consequences

How it works

Branches let learner choices reveal consequences, coaching and alternative routes before reconnecting to a common outcome.

Best used for

Conversations, safety decisions, customer handling and ethical choices.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Every route has a defined purpose, duration and outcome; the storyboard accounts for all nodes.

KEY CONTROLS · FAILURE MODE · PROOF

Branching Scenarios and Consequences · control and judgement

CONTROL MAP

Decision node; choice; consequence; feedback; variable; branch map; merge point; retry.

WATCH FOR

Branches that differ only cosmetically, dead ends, exponential complexity or moralising feedback.

QUALITY PROOF

Every route has a defined purpose, duration and outcome; the storyboard accounts for all nodes.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Learner-Controlled Pull and Progressive Disclosure

How it works

Learners pull concise supporting content when they need it, while essential decisions and objectives remain visible and navigation stays understandable.

Best used for

Optional examples, definitions, job aids, deeper explanations and non-linear exploration.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The learner can locate needed support, skip known material and still understand what is required for completion.

KEY CONTROLS · FAILURE MODE · PROOF

Learner-Controlled Pull and Progressive Disclosure · control and judgement

CONTROL MAP

Need-to-know core; optional layer; label; menu cue; visited state; completion rule; skip path; return point.

WATCH FOR

Locking every path, hiding required information behind exploration, overwhelming one screen or using unlabeled hotspots.

QUALITY PROOF

The learner can locate needed support, skip known material and still understand what is required for completion.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Interaction QA and Evidence

How it works

Interaction quality is demonstrated with a test matrix covering behaviour, accessibility, content and device conditions.

Best used for

Before stakeholder review, LMS upload and graded quiz release.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

A signed checklist records expected versus actual results and links defects to corrected versions.

KEY CONTROLS · FAILURE MODE · PROOF

Interaction QA and Evidence · control and judgement

CONTROL MAP

Happy path; wrong path; boundary; revisit; retry; keyboard; captions; focus; responsive player; resume.

WATCH FOR

Testing only the author’s preferred path or relying on preview when the publish target behaves differently.

QUALITY PROOF

A signed checklist records expected versus actual results and links defects to corrected versions.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Lab 07 · Build a Graded Question with Feedback

The camping module needs a defensible knowledge check on campsite-selection criteria.

Add a graded question with plausible distractors, feedback, scoring and accessible response behaviour.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the completed .story file, question specification, trigger/feedback screenshots and a five-case test matrix.**

Full click-by-click procedure · Learner Guide / Lab 07

Lab 08 · Build a Multi-Question Quiz and Result Logic

The course team must expand the check to cover campsite selection and essential equipment while reporting a reliable result.

Create a multi-question quiz with single- and multiple-response items, feedback, result logic and retry behaviour.

1. **Analyse**
2. **Choose**
3. **Apply**
4. **Inspect**
5. **Evidence**

EVIDENCE — **Retain the completed .story file, question-to-criterion map, result settings screenshot and pass/fail/retry test log.**

Full click-by-click procedure · Learner Guide / Lab 08

EXPLAIN THE DECISION

Topic 3 Checkpoint

Purpose

What must the learner understand or do?

Audience

Which preference or constraint shaped the design?

Mechanism

Which Storyline object or logic implements it?

Failure

What would make the experience unusable or misleading?

Proof

Which preview, publish or accessibility test demonstrates quality?

Next

What evidence would justify the next revision?

04

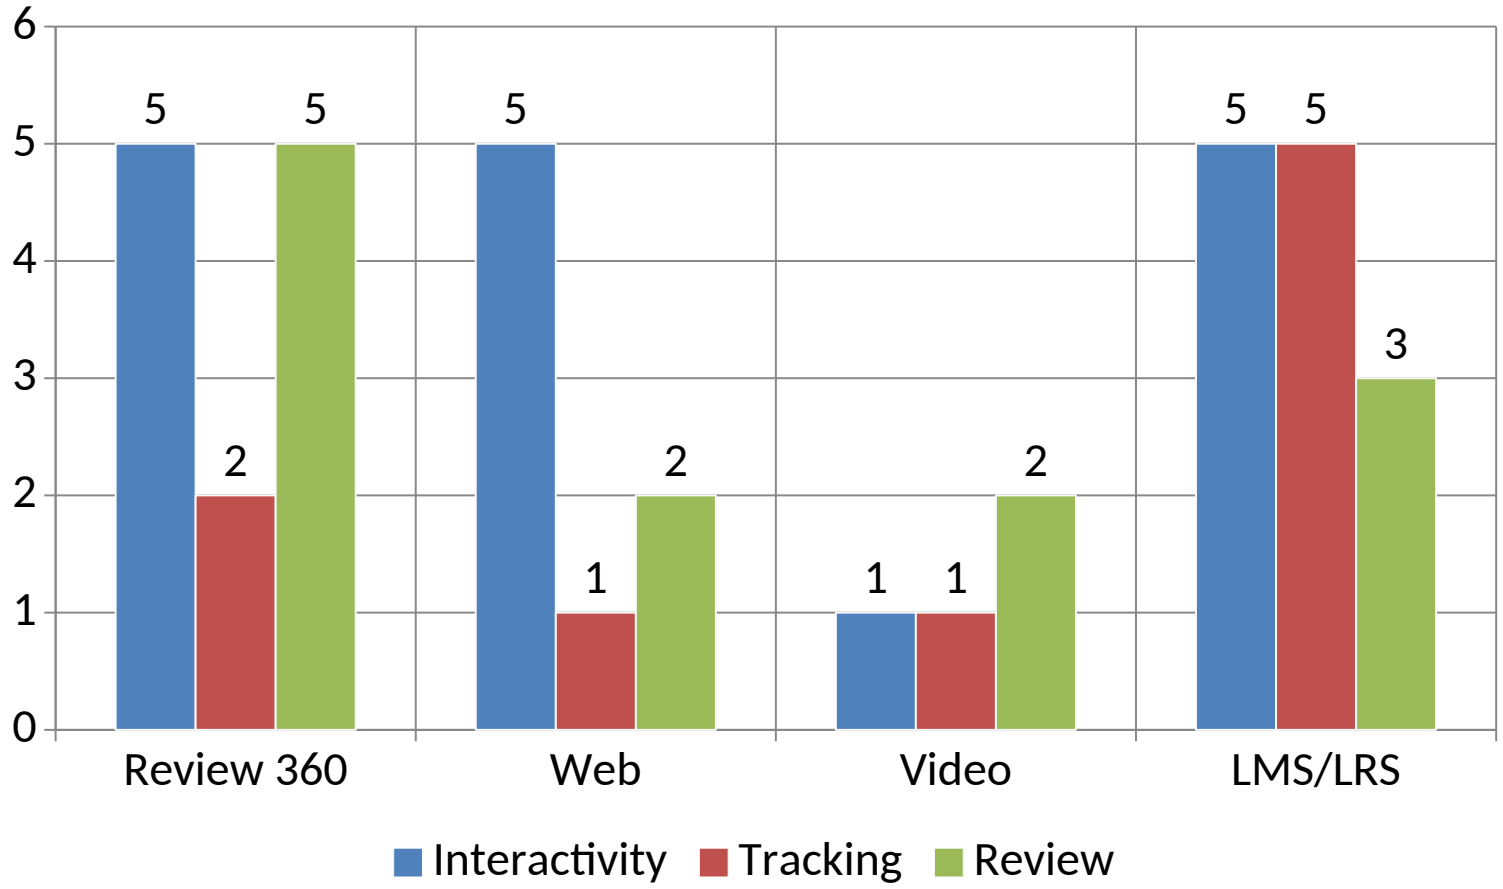

Presentation, Review and Distribution

Themes · masters · player · multi-device UX · accessibility · Review 360 · preview · LMS/LRS publishing · scheduling · governance

Day 2

EDITABLE CHANNEL COMPARISON

Distribution Capability

READ THE CHART

Illustrative 1–5 comparison: choose the channel from interaction, tracking, review and governance requirements—not from export convenience alone.

Editable native PowerPoint chart

Themes, Slide Masters and Design Governance

How it works

Themes define fonts and colours while masters/layouts define reusable structure and inheritance.

Best used for

Brand consistency, accessible templates and efficient multi-course production.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

New slides inherit approved typography, contrast and geometry without manual repair.

KEY CONTROLS · FAILURE MODE · PROOF

Themes, Slide Masters and Design Governance · control and judgement

CONTROL MAP

Theme fonts; theme colours; master; layout; placeholder; background; inherited object.

WATCH FOR

Direct formatting everywhere, editing the wrong level or using master objects as essential interaction targets.

QUALITY PROOF

New slides inherit approved typography, contrast and geometry without manual repair.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Player Features and Navigation

How it works

The player wraps course content with menu, controls, resources, seekbar, captions and responsive behaviour.

Best used for

Consistent navigation, learner control and delivery context.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The player supports the storyboard, accessibility plan and completion rules on desktop and mobile.

KEY CONTROLS · FAILURE MODE · PROOF

Player Features and Navigation · control and judgement

CONTROL MAP

Modern/classic player; menu; previous/next; seekbar; volume; captions; resources; labels; resume.

WATCH FOR

Player controls conflicting with custom navigation, unrestricted seeking bypassing required content or hidden captions.

QUALITY PROOF

The player supports the storyboard, accessibility plan and completion rules on desktop and mobile.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Multi-Device UX and Real-Device Testing

How it works

Multi-device design combines immediacy, clear affordances and touch-friendly interaction, then verifies the experience in the devices, orientations and contexts learners actually use.

Best used for

Responsive-player courses, mobile performance support and mixed desktop/tablet/phone audiences.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Desktop, tablet and phone tests record readability, touch accuracy, orientation, media performance, keyboard behaviour and completion/resume results.

KEY CONTROLS · FAILURE MODE · PROOF

Multi-Device UX and Real-Device Testing · control and judgement

CONTROL MAP

Screen size; orientation; touch target; spacing; hover alternative; readable type; virtual keyboard; gesture cue; bandwidth; real-device matrix.

WATCH FOR

Shrinking desktop layouts, hiding critical content in hover states, tiny controls, long text entry or trusting a responsive preview as final proof.

QUALITY PROOF

Desktop, tablet and phone tests record readability, touch accuracy, orientation, media performance, keyboard behaviour and completion/resume results.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Accessible Player and Focus Styling

How it works

Player accessibility settings affect readable text, focus visibility, keyboard navigation and learner control.

Best used for

Courses intended for broad public or workforce access.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Published output passes keyboard, zoom, focus and assistive-technology checks.

KEY CONTROLS · FAILURE MODE · PROOF

Accessible Player and Focus Styling · control and judgement

CONTROL MAP

Accessible text; focus colour; zoom-to-fit; keyboard shortcuts; labels; captions; playback speed.

WATCH FOR

Low-contrast focus, disabling navigation shortcuts without an equivalent or assuming authoring preview proves accessibility.

QUALITY PROOF

Published output passes keyboard, zoom, focus and assistive-technology checks.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Review 360 Collaboration

How it works

Review 360 publishes a review copy where stakeholders comment against slides and versions.

Best used for

Structured review, distributed stakeholders and traceable approval.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

Comments have owners and dispositions; the approved version maps to the retained .story source.

KEY CONTROLS · FAILURE MODE · PROOF

Review 360 Collaboration · control and judgement

CONTROL MAP

Publish/update item; reviewer link; password; comments; replies; resolve/reopen; version.

WATCH FOR

Using comments as the only requirement record, sharing sensitive content broadly or overwriting an approved version.

QUALITY PROOF

Comments have owners and dispositions; the approved version maps to the retained .story source.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Preview Strategy and Publish-Only Tests

How it works

Preview tests authoring logic quickly, while published output is required for web objects, LMS communication and final runtime behaviour.

Best used for

Progressive QA from slide to scene to full course and target environment.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The final package is tested in its actual browser/LMS target using the acceptance matrix.

KEY CONTROLS · FAILURE MODE · PROOF

Preview Strategy and Publish-Only Tests · control and judgement

CONTROL MAP

Preview slide/scene/project; replay; device view; publish; browser test; console/LMS test.

WATCH FOR

Treating preview as final evidence or testing only one browser and screen size.

QUALITY PROOF

The final package is tested in its actual browser/LMS target using the acceptance matrix.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Publishing Channels and Trade-offs

How it works

Storyline can publish to Review 360, web, video, Word, LMS/LRS and supported distribution platforms; each preserves different capabilities.

Best used for

Selecting delivery by interactivity, tracking, review, accessibility, connectivity and governance needs.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The chosen channel supports the required interaction, tracking and audience access.

KEY CONTROLS · FAILURE MODE · PROOF

Publishing Channels and Trade-offs · control and judgement

CONTROL MAP

Channel; interactivity; tracking; package; hosting; privacy; update process; offline need.

WATCH FOR

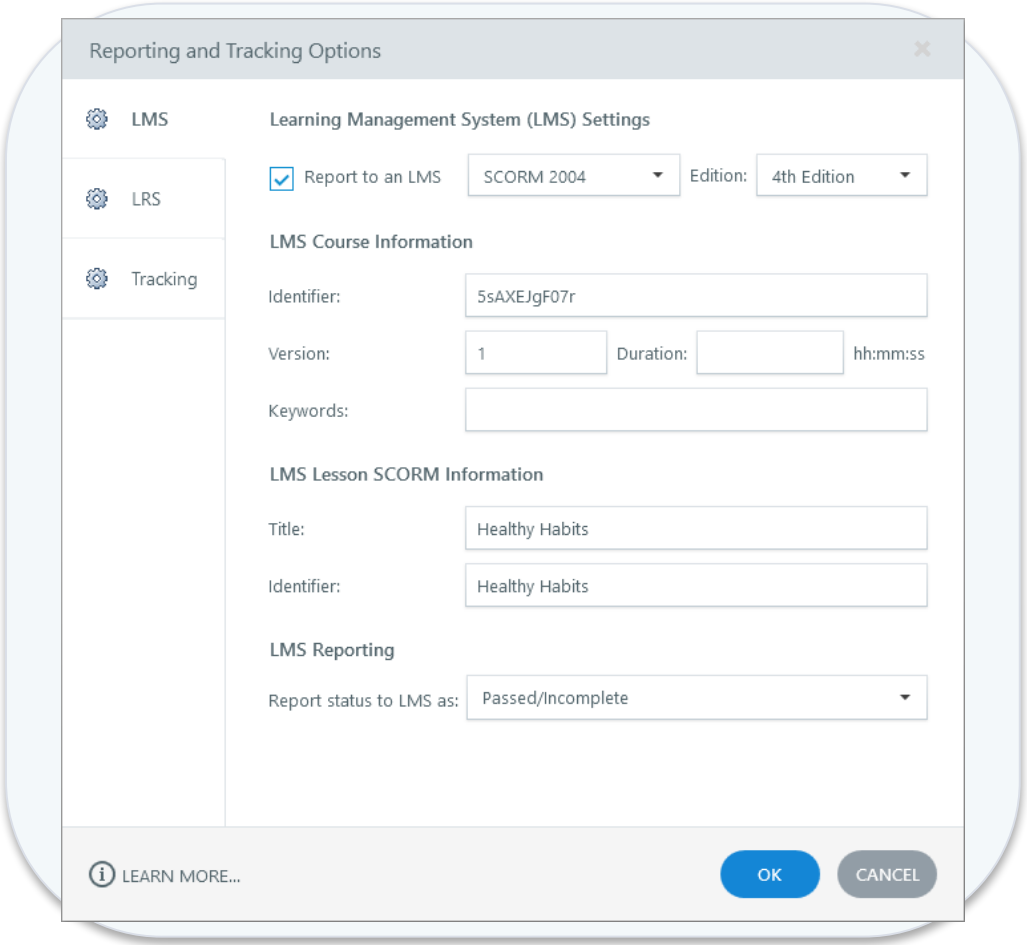

Publishing interactive content as video, hosting LMS output as plain web content or exposing source files.

QUALITY PROOF

The chosen channel supports the required interaction, tracking and audience access.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

LMS/LRS Standards and Tracking

1

How it works

SCORM, AICC, xAPI and cmi5 package content and communicate different completion, score and activity data to a delivery system.

2

Best used for

Tracked learning, compliance evidence and analytics across compatible LMS/LRS platforms.

3

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

4

Quality signal

A sandbox launch records the intended status, score, completion and resume data.

KEY CONTROLS · FAILURE MODE · PROOF

LMS/LRS Standards and Tracking · control and judgement

CONTROL MAP

Standard/version; completion trigger; result slide; passing score; reporting status; identifier; launch.

WATCH FOR

Choosing a standard the LMS does not support, changing identifiers carelessly or testing only the launch page.

QUALITY PROOF

A sandbox launch records the intended status, score, completion and resume data.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

CONCEPT 46 · HOW IT WORKS

Distribution Plan and Delivery Frequency

How it works

A distribution plan maps audience segments to channels, release timing, reminders, maintenance and measurement.

Best used for

Campaign learning, product launches, onboarding waves and recurring compliance content.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The plan justifies frequency and records owner, success measure and update rule.

Distribution Plan and Delivery Frequency · control and judgement

CONTROL MAP

Audience; channel; cadence; time zone; dependency; owner; metric; refresh trigger; escalation.

WATCH FOR

Sending too frequently, ignoring local time/context or publishing updates without change communication.

QUALITY PROOF

The plan justifies frequency and records owner, success measure and update rule.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Content Strategy Execution Guidelines

How it works

Guidelines turn repeated design and publishing decisions into a governed, reviewable operating model.

Best used for

Multi-author teams and courses that need consistent quality over time.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

A new author can build and publish a compliant module using the guideline and checklist.

KEY CONTROLS · FAILURE MODE · PROOF

Content Strategy Execution Guidelines · control and judgement

CONTROL MAP

Voice; brand; accessibility; interaction patterns; naming; review gates; rights; publishing; archive.

WATCH FOR

A style guide that covers appearance but not behaviour, evidence, ownership or exceptions.

QUALITY PROOF

A new author can build and publish a compliant module using the guideline and checklist.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Maintenance, Analytics and Lifecycle

How it works

Published learning is monitored, reviewed and retired using learner evidence, defects, content age and business change.

Best used for

High-use, regulated or frequently changing learning portfolios.

Professional decision

Choose this method when its learning purpose, audience and runtime behaviour fit the brief.

Quality signal

The lifecycle register identifies current version, review trigger, decision and preserved evidence.

KEY CONTROLS · FAILURE MODE · PROOF

Maintenance, Analytics and Lifecycle · control and judgement

CONTROL MAP

Owner; version; review date; analytics; feedback; defect priority; source change; retirement; archive.

WATCH FOR

No owner, links that outlive the source, silent changes or metrics collected without a decision purpose.

QUALITY PROOF

The lifecycle register identifies current version, review trigger, decision and preserved evidence.

Decision rule · preserve a baseline, test every path, then verify the published experience in its delivery environment.

Lab 09 · Add a Summary, Review and Publish Plan

Creative Minds is preparing the camping course for stakeholder review and a controlled LMS release.

Create a useful summary slide, define review criteria and configure a publish plan aligned with channel, tracking and delivery frequency.

1	2	3	4	5
Analyse	Choose	Apply	Inspect	Evidence

EVIDENCE — **Retain the completed .story file, summary screenshot, QA matrix, Review 360 plan and distribution/frequency decision record.**

Full click-by-click procedure · Learner Guide / Lab 09

EXPLAIN THE DECISION

Topic 4 Checkpoint

Purpose

What must the learner understand or do?

Audience

Which preference or constraint shaped the design?

Mechanism

Which Storyline object or logic implements it?

Failure

What would make the experience unusable or misleading?

Proof

Which preview, publish or accessibility test demonstrates quality?

Next

What evidence would justify the next revision?

Professional Authoring Loop

Brief

Clarify objective, audience, channel and constraints.

Storyboard

Map screens, media, interaction, accessibility and evidence.

Build

Use reusable layouts, named objects and explicit logic.

Test

Exercise paths, states, variables, captions, focus and resume.

Review

Record stakeholder comments and dispositions.

Deliver

Publish, verify, schedule and retain the .story source.

CONTENT GOVERNANCE

Copyright and Asset Permission

Ownership

Identify the creator or owner.

Permission

Public visibility does not grant reuse.

Scope

Check modification, commercial and redistribution rights.

People

Confirm consent and privacy context.

Attribution

Credit as the licence requires.

Record

Retain source, licence, consent, date and permitted use.

Responsible Generative AI

Inputs

Use only material you may provide.

Log

Record prompt, source permissions and selected variation.

Review

Check plausibility, bias, accidental text and artefacts.

Terms

Confirm current feature and service terms.

Provenance

Retain generation and edit evidence.

Responsibility

The author owns the publication decision.

EXECUTION CONTROL

Stakeholder Review

Describe

State purpose, audience and key decisions.

Show

Use Review 360 or approved evidence against the storyboard.

Ask

Review against explicit content, interaction and accessibility criteria.

Record

Capture owner, comment and due date.

Decide

Accept, adapt or reject with reason.

Revise

Publish one traceable corrected version.
