Lab 07 - Build a Graded Question with Feedback

Course: Articulate Storyline 360 Masterclass (C1058) Version: v1.0 · 2 October 2026

Scenario

The camping module needs a defensible knowledge check on campsite-selection criteria.

Objective

Add a graded question with plausible distractors, feedback, scoring and accessible response behaviour.

Supplied Articulate Storyline files

- 06_01_BEGIN.story
- 06_01_END.story

Detailed procedure

1. Create Lab-07-YourName.story from 06_01_BEGIN.story.
2. Define the learning objective and write one realistic decision-focused question with one defensible correct answer.
3. Insert the appropriate graded question type and configure prompt, choices and correct response.
4. Write concise feedback that explains the contextual consequence of each response, not merely whether it is correct.
5. Set attempts, score, required status and navigation to match the storyboard.
6. Format response states with more than colour alone and verify focus/reading order.
7. Preview correct, incorrect, incomplete, retry and revisit paths.
8. Compare with 06_01_END.story; verify that the result/completion model receives the intended score.
9. Save the completed .story file and test evidence.

Evidence to retain

Retain the completed .story file, question specification, trigger/feedback screenshots and a five-case test matrix.

Acceptance criteria

[ ] The realistic decision and consequence-based feedback align to the taught criterion.

[ ] Scoring and attempts behave as specified.

[ ] All response states are perceivable and keyboard/touch operable.

[ ] Correct, incorrect, incomplete, retry and revisit tests pass.

Reflection prompts

- Which storyboard or audience requirement drove your most important decision?
- Which Storyline panel, trigger or setting proves that decision is implemented?
- What accessibility, rights or publishing evidence must accompany the finished project?
