Lab 08 - Build a Multi-Question Quiz and Result Logic

Course: Articulate Storyline 360 Masterclass (C1058) Version: v1.0 · 2 October 2026

Scenario

The course team must expand the check to cover campsite selection and essential equipment while reporting a reliable result.

Objective

Create a multi-question quiz with single- and multiple-response items, feedback, result logic and retry behaviour.

Supplied Articulate Storyline files

- 06_02_BEGIN.story
- 06_02_END.story

Detailed procedure

1. Create Lab-08-YourName.story from 06_02_BEGIN.story.
2. Map each question to its learning criterion and define the acceptable evidence.
3. Add a single-response question about safe campsite selection and a multiple-response question about essential equipment.
4. Configure correct options, scores, attempts, required status and feedback for every choice.
5. Add or update the result slide; select the intended tracked questions and passing score.
6. Configure submit, retry and review behaviour without exposing correct answers prematurely.
7. Check focus order, response states and clear instructions for the multiple-response interaction.
8. Preview pass, fail, retry, partial selection, resume and review paths; verify touch targets and spacing at a phone-sized player view.
9. Compare with 06_02_END.story, save the completed .story file and results test log.

Evidence to retain

Retain the completed .story file, question-to-criterion map, result settings screenshot and pass/fail/retry test log.

Acceptance criteria

[ ] Both questions test the taught decisions through meaningful learner choices.

[ ] The result slide tracks the correct items and score.

[ ] Retry and review behave as intended.

[ ] Keyboard, focus, touch-target and instruction checks pass.

Reflection prompts

- Which storyboard or audience requirement drove your most important decision?
- Which Storyline panel, trigger or setting proves that decision is implemented?
- What accessibility, rights or publishing evidence must accompany the finished project?
